SECTION 1: Overview

The University of Maryland Medical Center (UMMC) and the Baltimore City Fire Department (BCFD) partnered to implement two Mobile Integrated Health (MIH) Community Paramedicine (CP) pilot programs in West Baltimore. The purpose of these MIH programs is to comprehensively improve the health of Baltimore citizens; address gaps in the delivery of health care services to patients; and reduce the need for emergency medical services (EMS) transport, emergency department evaluations, and hospital readmissions.

The Transitional Health Support (THS) Program utilizes a multi-disciplinary team to provide robust, patient-centered support to individuals at home, linking medical, pharmacological, social, and community resources. The field team, consisting of a BCFD community paramedic, a BCFD registered nurse (RN), and a UMMC nurse practitioner (NP) or a UMMC physician (MD), delivers in-home follow-up care and assists with chronic disease management for 30 days after hospital discharge. Through the support of an interdisciplinary Operations Center, staffed by a pharmacist, a social worker, community health workers (CHWs), and emergency medical technicians (EMTs), the program comprehensively addresses barriers to achieve improved health for enrolled patients.

THS Timeline of Activities and Deliverables:

- **SEPTEMBER**
  - September 14: Conducted in-depth analysis of home visit scene time to improve CP team workflow and efficiency
  - September 28: Presented to UMMC physician leadership on THS capabilities for patient enrollment

- **OCTOBER**
  - October 1: Placed second CP field team into service
  - October 8: Developed and implemented revised Epic smartphrases for field team documentation
  - October 15: Enrolled first UMMC Midtown patient
  - October 15: Hired second BCFD EMT to work in the operations center
  - October 29: Sponsored a community outreach forum for West Baltimore citizens

- **NOVEMBER**
  - November 8: Conducted enrollment process review for improved workflow
  - November 16: All-Hands-Reconvene training day
The Minor Definitive Care Now (MDCN) Program provides low-acuity 911 callers with the option to receive immediate, on-scene care from an advanced-level provider (NP or MD) and a BCFD community paramedic. The patients are connected to appropriate follow-up care, either in or outside the University of Maryland Medical System (UMMS).

MDCN Timeline of Activities and Deliverables:

**SEPTEMBER**
- September 12: Presented to Maryland Institute for Emergency Medical Services Systems (MIEMSS) EMS Protocol Review Committee and received approval for MDCN program protocol

**OCTOBER**
- October 9: Presented to MIEMSS EMS Advisory Board and received approval for MDCN program protocol
- October 10: Launched MDCN program

**NOVEMBER**
- November 16: Held an All-Hands-Reconvene training day

Second-Quarter THS Program Accomplishments:
- Expanded scope of MIH Operations Center to include home visits by a community health worker (CHW) and social worker.
- Improved documentation with the use of smartphrases that streamline and standardize electronic medical record entries by field teams.
- Arranged for a BCFD EMT to attend interdisciplinary rounds (IDR) at the University of Maryland Medical Center Midtown Campus.
- Employed a second field team (a BCFD community paramedic and BCFD RN) to accommodate increased patient enrollments and operational demand.
- Held an All-Hands-Reconvene training day for updates and continuing education with UMMC Operations Center staff, BCFD community paramedics, BCFD RNs, quality assurance personnel, and program leaders (see photo).

Second-Quarter MDCN Program Accomplishments:
- Initiated program on October 10, 2018.
- Conducted a provider clinical education program.
- Trained community health workers in on-site patient registration.
- Implemented Firstwatch (a computer-based Geofence that is integrated with the 911 dispatch system to deliver real-time notification of calls from within the program’s identified zipcode catchment areas).

MIH team evaluating a patient in her home

MIH team at All-Hands-Reconvene training day November 16, 2018
SECTION 2: Transitional Health Support (THS) Program

Through its community paramedicine team, the THS pilot program provides comprehensive multidisciplinary support to effectively transition patients to their home after discharge from the hospital.

THS Patient Story
Ms. Barbara had a complex medical history contributing to multiple hospitalizations. She was identified as someone who could benefit from comprehensive home health support and was enrolled in the THS Program while in the hospital. During the initial home visit, the CP THS team performed an assessment to evaluate her medical, social, pharmacologic, and environmental issues and identified the following needs:

• Lack of certain critical medications and duplicate medications for other conditions.
• Difficulty understanding which specialists to see for follow-up and which ones accept her insurance.
• Care coordination between multiple medical providers.
• Assistance in obtaining essential medical equipment.
• Transportation to and from doctors’ offices and follow-up diagnostic testing.

The team addressed these health challenges, and hospital readmission was avoided while Ms. Barbara was enrolled in the THS Program.

Days since inception: **199**  
Days operational: **143**

The THS Program identifies patients with medical or social needs through UMMC’s interdisciplinary rounds. Seventy percent of the patients who have been offered the services of the THS Program accepted them.

UMMC interdisciplinary rounds include physicians, nurses, social workers, physical therapists, case managers, and a team member from the MIH pilot program. This group assists with discharge planning and refers complex West Baltimore patients to the THS program.

During the second quarter, the THS team members were further integrated into UMMC’s interdisciplinary rounds, enhancing their understanding of the hospital’s discharge process and increasing patient enrollment into the program.

Demographics

In this current pilot phase, the UMMC/BCFD MIH CP program is available to residents of West Baltimore communities. The demographics of the 88 patients who were enrolled in the THS program between September and November 2018 are described below:

<table>
<thead>
<tr>
<th>Characteristics</th>
<th>N=88</th>
</tr>
</thead>
<tbody>
<tr>
<td>Age in years, average (range)</td>
<td>62 (29-96)</td>
</tr>
<tr>
<td>Female</td>
<td>53 (60%)</td>

Patient Needs Assessment

Through chart review, the MIH CP team identifies challenges to an individual’s health and facilitates interventions to meet patients’ needs.

Patient Satisfaction

The THS program constantly receives valuable feedback from patients and carefully considers recommendations from the people it is designed to help. High patient satisfaction scores were achieved in the first and second quarters.

*Range is scored 0-10, with 10 representing the highest level of satisfaction.*
Evaluation and Outcomes

We compared the Health Services Cost Review Commission’s risk-adjusted rates of readmission to any hospital in Maryland between patients enrolled in the THS Program and patients with similar characteristics not enrolled in the THS Program.

For patients enrolled in the program, the risk-adjusted readmission rate decreased by 10% from August to September 2018 and by another 11% from September to October 2018. In comparison, the risk-adjusted readmission rate for similar patients not enrolled in the program increased by 7% and decreased by 10% over the same time periods.

For patients enrolled in the THS Program, we excluded that initial inpatient stay and then compared their use of hospital services 1 month before and after enrollment as well as 3 months before and after enrollment.

During the period covering 1 month before to 1 month after enrollment, THS patients’ use of hospital resources (emergency departments, observation units, and inpatient units) fell 10% and their use of outpatient services increased 10%.

For the longer period extending 3 months before to 3 months after enrollment, THS patients used emergency departments and inpatient units 2% less frequently and outpatient services 2% more frequently.

Next Steps

- Initiate an improvement process that adjusts enrollment scheduling to optimize program resources to patient needs.
- Consult with external community paramedicine experts to conduct an objective assessment of our West Baltimore Mobile Integrated Health Program.
- Propose an increase in the use of telemedicine during home visits to MIEMSS, which would modify the THS protocol to increase telemedicine capabilities, specifically during initial home visits.
- Enhance the THS Program’s ability to ascertain patients’ prescription needs and to intervene when substance abuse is suspected.
- Build into Epic documentation the ability for improved data retrieval, analysis, and interpretation.
SECTION 3: Minor Definitive Care Now (MDCN) Program

The UMMC/BCFD MDCN Program augments routine Baltimore City 911 service, giving patients with low-acuity conditions the option of on-scene treatment of their illness or injury, avoiding ambulance transport and ED waiting time. By treating patients at the scene of illness or injury, the MDCN Program helps patients return to their lives faster, prevents ambulance transportation, reduces ED wait times and potentially reduces healthcare costs.

Patient Story

Ms. Vondirea was on a bus, when it stopped short, causing her to lose her balance and fall. 911 was called to transport her to the hospital for ED evaluation. The MDCN team, consisting of an advanced-level provider (ALP) and a paramedic arrived and offered her on-scene treatment. She agreed and was evaluated. Ms. Vondirea, a diabetic, had minor injuries and was given a prescription and information to help her manage her care. During her evaluation, an elevated blood sugar was identified. The MDCN team notified her doctor from the scene and a plan was made to follow up that day for a potential medication adjustment.

MDCN PROGRAM STATISTICS

| Days since inception: | 51 |
| Days operational:     | 35 |

Responses:

The MDCN team screened and responded to 59 calls.

Total number of patients screened: 59

38 INELIGIBLE PATIENTS:

• Patients were not medically able to be treated on-scene by the ALP.
• Patient met inclusion criteria but required additional supplies or equipment that was not available for on-scene management.
• Patient’s complaints were not appropriate for a 911 designated “Alpha” call determination.

14 ELIGIBLE PATIENTS:

7 eligible patients refused care at the scene:

• 3 patients requested transport to an ED
• 2 patients refused MDCN for unknown reasons
• 1 patient asked to be transported to a UMMC ED
• 1 patient refused all 911 assistance

7 eligible patients were treated and discharged:

• Digestive system issues
• Rashes
• Musculoskeletal pains
• Ear, nose, mouth, and throat concerns

7 OUTLIERS:

• 4 calls resulted in no patient contact (false call, patient was transported before NP’s arrival).
• 3 calls with incomplete data (process has since been corrected).
**Time Savings**

The MDCN team successfully treated seven patients during the initial week of the MDCN program. The average call time for Baltimore City EMS patient transports is 77 minutes. On-scene treatment of patients by the MDCN team decreased EMS unit utilization time to 51 minutes per incident. BCFD has calculated an average saving of 26 minutes of utilization time for EMS transport units per MDCN case.

BCFD anticipates continued reduction in EMS utilization time on incidents when the MDCN manages patients at the scene.

**Patient Satisfaction**

The MDCN team asks patients to complete a survey after they receive treatment. At the conclusion of this quarter, the patient satisfaction score is favorable at a score of 10/10.

**Quality Assurance**

- No safety issues related to patient encounters and treatment have been identified.
- No patients who received MDCN treatment presented for unscheduled emergency department evaluation within 72 hours.

**Next Steps**

- Propose to MIEMSS, for approval, a protocol modification for MDCN providers to allow evaluation of Bravo-level calls.
- Expand the program’s identified catchment areas.
- Propose to MIEMSS, for approval, the concept of having EMS providers refer patients to the MDCN team for evaluation.
- Employ Lyft services to transport patients to urgent care centers.
- Distribute a job satisfaction and employee engagement survey to MIH CP staff to guide program development.
- Implement a 24-hour follow-up phone call to patients who receive MDCN.

**MDCN PATIENT FEEDBACK**

“This is great; I do not want to go to the ED.”

“I can’t get an appointment with my doctor until next week; thank you so much.”
Program Leadership

Mark R. Fletcher
Deputy Chief of Emergency Medical Services
Baltimore City Fire Department

David Marcozzi, MD, MHS-CL, FACEP
Associate Professor
Department of Emergency Medicine
Co-Director of the Program in Health Disparities and Population Health
Department of Epidemiology and Public Health
University of Maryland School of Medicine
